Scaffolds & Supports	KA assignments can often be re-tried to improve learning. Videos are utilized to demonstrate not only key concepts, but also frequent points of errors, helping students avoid pitfalls.				
Teacher Office Hours 2 hours daily (all classes): <ul style="list-style-type: none">ContactPlatform	Monday 12:00 – 2:00 pm	Tuesday 12:00 – 2:00 pm	Wednesday 12:00 – 2:00 pm	Thursday 12:00 – 2:00 pm	Friday 12:00 – 2:00 pm

Student Name:
Teacher Name: **De La Mora**
Class Name/Subject:
Algebra 2
Period:
Assignment Week #: **1**

NOTES: Complete all work on a separate sheet of paper.
Include the heading provided on each worksheet you turn in. Show all work.

Monday

Answer **exactly**,
using a **simplified radical** if needed.

Do not convert to
decimals unless the
problem starts with a
decimal. Round
your answer to the
nearest hundredth.

Main Ideas/Questions	Notes
Pythagorean Theorem 	<ul style="list-style-type: none"> Used to find the missing <u>side</u> of a <u>right</u> triangle. Sides <u>a</u> and <u>b</u> are called <u>legs</u>. Side <u>c</u> is called the <u>hypotenuse</u>. For any right triangle: $a^2 + b^2 = c^2$

$$8^2 + 13^2 = x^2$$

$$64 + 169 = x^2$$

$$233 = x^2$$

$$15.3 = x$$

$$19.1^2 + x^2 = 30.5^2$$

$$364.81 + x^2 = 930.25$$

$$x^2 = 565.44$$

$$x = 23.8$$

$$11^2 + x^2 = 24^2$$

$$121 + x^2 = 576$$

$$x^2 = 455$$

$$x = 21.3$$

$$12^2 + a^2 = 14^2$$

$$144 + a^2 = 196$$

$$a^2 = 52$$

$$a = 7.2$$

$$12^2 + b^2 = 29^2$$

$$144 + b^2 = 841$$

$$b^2 = 697$$

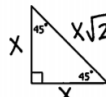

$$b = 26.4$$

$$x = 7.2 + 26.4 = 33.6$$

Multistep problem. Find the missing side using Pythagorean theorem. Use this information to solve for the needed piece of information.

Tuesday

Answer **exactly**, using a **simplified radical** if needed.

45°-45°-90° Special Right Δ		<ul style="list-style-type: none"> Leg = <u>x</u> Hypotenuse = <u>$x\sqrt{2}$</u>
------------------------------------	---	--

The legs of a 45°-45°-90° triangle are always congruent.

$$x = \frac{8}{\sqrt{2}}$$

$$y = 8\sqrt{2}$$

$$x = \frac{25\sqrt{2}}{25}$$

$$y = 25$$

$$\frac{19}{\sqrt{2}} = \frac{19\sqrt{2}}{2}$$

$$x = \frac{19\sqrt{2}}{2}$$

$$y = \frac{19\sqrt{2}}{2}$$

Problem 19

Formula $a\sqrt{2}$

$19 = a\sqrt{2}$

• Set problem = Formula

• Solve

30°-60°-90° Special Right Δ		<ul style="list-style-type: none"> Shorter Leg = <u>x</u> Longer Leg = <u>$x\sqrt{3}$</u> Hypotenuse = <u>2x</u>
------------------------------------	---	--

The shorter leg is always opposite the 30° angle and the longer leg is always opposite the 60° angle.

$$x = \frac{5\sqrt{3}}{10}$$

$$y = 10$$

$$x = \frac{28}{14\sqrt{3}}$$

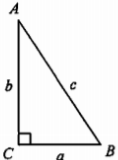

$$y = 14\sqrt{3}$$

$$x = \frac{16}{16\sqrt{3}}$$

$$y = 16\sqrt{3}$$

Wednesday

Ratios must be exact answers. **Do not convert to decimals.**

TRIGONOMETRIC RATIOS		
	SINE	The ratio of the leg opposite the angle to the hypotenuse. $\sin A = \frac{a}{c}$ $\sin B = \frac{b}{c}$
	COSINE	The ratio of the leg adjacent to the angle to the hypotenuse. $\cos A = \frac{b}{c}$ $\cos B = \frac{a}{c}$
	TANGENT	The ratio of the leg opposite the angle to the leg adjacent to the angle. $\tan A = \frac{a}{b}$ $\tan B = \frac{b}{a}$
* REMEMBER!! * SOH CAH TOA $\sin = \frac{\text{opp}}{\text{hyp}}$ $\cos = \frac{\text{adj}}{\text{hyp}}$ $\tan = \frac{\text{opp}}{\text{adj}}$		

Always identify the angle of interest and the sides provided.

 Assignment Week #: **1**

NOTES: Complete all work on a separate sheet of paper.
 Include the heading provided on each worksheet you
 turn in. Show all work.

<p>1.</p>	<ul style="list-style-type: none"> $\sin A = \frac{5}{13}$ $\cos A = \frac{12}{13}$ $\tan A = \frac{5}{12}$ $\sin C = \frac{12}{13}$ $\cos C = \frac{5}{13}$ $\tan C = \frac{12}{5}$
<p>2.</p> <p> $9^2 + 12^2 = x^2$ $225 = x^2$ $15 = x$ </p>	<ul style="list-style-type: none"> $\sin W = \frac{12}{15} = \frac{4}{5}$ $\cos W = \frac{9}{15} = \frac{3}{5}$ $\tan W = \frac{12}{9} = \frac{4}{3}$ $\sin X = \frac{9}{15} = \frac{3}{5}$ $\cos X = \frac{12}{15} = \frac{4}{5}$ $\tan X = \frac{9}{12} = \frac{3}{4}$
<p>3.</p> <p> $\sin 28 = \frac{x}{19}$ $x = 19 \cdot \sin 28$ $x = 8.9$ </p>	<p>2.</p> <p> $\tan 41 = \frac{x}{32}$ $32 \cdot \tan 41 = x$ $27.8 = x$ </p>
<p>3.</p> <p> $\cos 21 = \frac{x}{26}$ $26 \cdot \cos 21 = x$ $24.3 = x$ </p>	<p>4.</p> <p> $\tan 55 = \frac{x}{8}$ $8 \cdot \tan 55 = x$ $11.4 = x$ </p>

Label the angle of
 interest and
 Adjacent, Opposite
 and Hypotenuse
 Side.

Thursday

Round your answer to
 the nearest hundredth.

Steps for Solving

- Identify \angle of interest
- Identify relationships of sides
- Set up equation
- Solve by inverse function

EXAMPLE 1

$\tan X = \frac{9}{20}$
 $X = \tan^{-1}(9/20)$
 $X = 24.2^\circ$

EXAMPLE 2

$\cos X = \frac{17}{32}$
 $X = \cos^{-1}(17/32)$
 $X = 57.9^\circ$

Finding missing ANGLES with TRIGONOMETRY

EXAMPLE 3

$\tan X = \frac{13}{18}$
 $X = \tan^{-1}(13/18)$
 $X = 35.8^\circ$

EXAMPLE 4

$\sin X = \frac{21}{28}$
 $X = \sin^{-1}(21/28)$
 $X = 48.6^\circ$

$\tan^{-1}(\tan X = \frac{7}{5})$
 $X^\circ = \tan^{-1}(\frac{7}{5})$
 $X \approx 54.46^\circ$

$\sin^{-1}(\sin X = \frac{21}{28})$
 $X^\circ = \sin^{-1}(\frac{21}{28})$
 $X \approx 48.59^\circ$

$\cos^{-1}(\cos X = \frac{14}{22})$
 $X^\circ = \cos^{-1}(\frac{14}{22})$
 $X \approx 50.48^\circ$

 Assignment Week #: **1**

Complete all work on a separate sheet of paper.
Show all work. Include the heading provided on each worksheet you turn in.

Monday

Find the value of x for each triangle.

Find the value of x for each triangle.

Find the value of x for each triangle.

Find the value of x for each isosceles triangle.

Find the value of x for each isosceles triangle.

Find the value of x in the isosceles triangle.

Tuesday

In the right triangle shown,
 30° and $AB = 8$.
How long is BC ?
Answer exactly, using a radical if needed.

$\angle A =$
 Answer

In the right triangle shown,
 $AC = CB = 7$.
How long is AB ?
Answer exactly, using a radical if needed.

In the right triangle shown,
 $AC = BC$ and $AB = 6\sqrt{2}$.
How long are each of the legs?
Answer exactly, using a radical if needed.

In the right triangle shown, $AC = BC$ and $AB = 4$.
How long are each of the legs?
Answer exactly, using a radical if needed.

In the right triangle shown,
 $\angle A = 30^\circ$ and $AB = 4\sqrt{3}$.
How long is AC ?
Answer exactly, using a radical if needed.

In the right triangle shown,
 $\angle A = 30^\circ$ and $AC = 12$.
How long is AB ?
Answer exactly, using a radical if needed.

Complete all work on a separate sheet of paper. **Show all work.** Include the heading provided on each worksheet you turn in.

Wednesday

Find $\cos(\alpha)$ in the triangle.

Find $\tan(\alpha)$ in the triangle.

Find $\sin(\beta)$ in the triangle.

Find $\sin(\alpha)$ in the triangle.

Find $\sin(\alpha)$ in the triangle.

Find $\cos(\beta)$ in the triangle.

Find $\tan(\beta)$ in the triangle.

Thursday

AC=

Round your answer to the nearest hundredth.

BC=

Round your answer to the nearest hundredth.

AC=

Round your answer to the nearest hundredth.

AB=

Round your answer to the nearest hundredth.

Summary Assignment Week#1

SHOW YOUR WORK on a separate sheet of paper.

Student Name:	
Teacher Name:	
Subject:	Algebra 2
Period:	
Week:	#1

Use the Pythagorean Theorem and Trigonometric Ratios to identify the unknown values. Answers for lengths should be exact, using a radical if needed. Answers for angles should be rounded to the nearest hundredth.

1.

2.

3.

4.

5.

6.

7.

8. Find each trig ratio as a simplified fraction.

- $\sin M = \underline{\hspace{2cm}}$
- $\cos M = \underline{\hspace{2cm}}$
- $\tan M = \underline{\hspace{2cm}}$

9. Find each trig ratio as a simplified fraction.

- $\sin L = \underline{\hspace{2cm}}$
- $\tan N = \underline{\hspace{2cm}}$
- $\cos L = \underline{\hspace{2cm}}$
- $\sin N = \underline{\hspace{2cm}}$

10. Solve for x. Round to the nearest hundredth.

11. Solve for x. Round to the nearest hundredth.

12. Find the value of x. Round to the nearest tenth.

13. Find m4W.
